WELCOME

INTRODUCTION

One of Egypt's leading diversified agribusiness groups

Established in the 1970s and incorporated in 1981, Dakahlia Group has evolved into one of Egypt’s leading diversified agribusiness and industrial groups. With a fully integrated value chain spanning poultry, agriculture, food processing, agrochemicals, and commodities trading, the Group maintains a strong and expanding presence across more than 50 international markets.

Rooted in a legacy of integrity and long-standing partnerships, Dakahlia Group is driven by a commitment to excellence, delivering consistent quality, operational efficiency, and sustainable value. Leveraging deep industry expertise and advanced technologies, we ensure premium standards at every stage bringing trusted products from source to market with precision and reliability.

About Us

+45

YEARS OF GROWTH

Established in the 1970s and incorporated in 1981, Dakahlia Group has grown into a diversified agribusiness and industrial group of more than 4,700 people.

We operate a fully integrated value chain — breeding, hatching and processing poultry, cultivating reclaimed farmland, manufacturing animal feed, distributing agrochemicals and trading commodities — controlling quality at every link.

Leveraging deep industry expertise and advanced technologies, we deliver premium standards across more than 50 international markets, bringing trusted products from source to market with precision and reliability.

OUR DIVISIONS & BRANDS

A FULLY INTEGRATED VALUE CHAIN

Vision, Mission & Values

A shared purpose guides every decision from the farms we cultivate to the markets we serve at home in Egypt and around the world.

Our Vision

To be a global leader in the agricultural and food sectors, a paragon of business excellence, and the first choice for our stakeholders.

Our Mission

Consistently provide superior agriculture and food products on a local and global scale, upholding our values at the core of every endeavor.

OUR VALUES

At Dakahlia Group, our values are the foundation of our business, guiding how we operate, innovate, and create long-term value for customers, partners, employees, and communities.

Poultry Production

Our poultry sector operates as a fully integrated system, ensuring quality, efficiency and performance throughout the entire production cycle — from high-quality feed and premium day-old chicks through advanced hatcheries and well-managed breeder farms to finished broilers, with strict quality control at every stage.

Broilers and Breeders

Broiler operations at El Asher and Natroun sectors form a fully integrated production system with more than 14 climate-controlled farms. At El Asher, broiler production spans 14 diverse farms ranging from 35,000 to 340,000 birds per farm, reaching a total capacity of 2 million birds per cycle. At Natroun, broiler production includes 5 operational floor-rearing farms with a capacity of 1.32 million birds per cycle, alongside 3 battery-rearing farms under construction expected to add an additional 750k birds per cycle. Together, both operational farms ensure scalable, efficient, and high-performance broiler production under advanced controlled housing systems.

Integrated Breeder Ecosystem

Breeder operations at the South Valley & Delta sectors form a fully integrated production system with a total capacity of 1.4 million hens per cycle, supporting approximately 80 million chicks annually. The South Valley project in Minya includes 12 stations with 8 barns each, housing around 10,000 hens per barn and reaching 1 million hens per cycle. This is complemented by the Delta Breeder Sectors (Delta 1 & Delta 2), which provide additional capacity and operational flexibility. The system is further supported by Al Obour Hatchery and Feeds Hatchery.

Hatcheries Labs

We are the largest producer of day-old chicks in Egypt, with an annual incubation capacity of 130 million eggs and production output of around 113 million high-quality chicks. Our advanced hatchery operations ensure optimal hatchability, biosecurity, and uniformity, supported by strict quality control at every stage. Using modern incubation technology and robust operational protocols, we consistently deliver premium chicks with superior health, strong performance, and high survivability. This has established a strong market reputation for reliability, consistency, and excellence, making us a trusted partner for poultry producers across the industry.

Innovation in Hatchery Operations

Our facilities operate 26 state-of-the-art incubators with a combined capacity of approximately 40 million eggs per cycle, supported by advanced Belgian Petersime systems to ensure precise incubation conditions and optimal hatch performance. Strict biosecurity and hygiene protocols are maintained throughout operations, with all output verified negative for key pathogens including MG, REO, Adeno, AE, and CA. Quality is further reinforced through controlled feed additives and vitamin programs that enhance chick health and productivity, achieving flock uniformity above 80% to ensure consistent growth performance across all cycles.

Sadat City Feed Mill

The Feed Mill Factory, located in Sadat City, is the largest feed production facility in the Middle East, setting a regional benchmark in scale, automation, and operational excellence. Fully automated with advanced Swiss engineering technology, the plant ensures precision, efficiency, and consistency across all production lines. It manufactures a wide range of products, including poultry, aqua, livestock feed, and pet food, with a production capacity of 180 tons per hour. Products are offered in flexible packaging options, including 25 kg, 50 kg, and bulk formats, to meet customer requirements. The facility is supported by a substantial storage capacity of 45,000 tons, ensuring uninterrupted supply and strong logistical efficiency. To uphold the highest standards of product integrity and safety, the plant operates under rigorous quality control and quality assurance systems embedded throughout every stage of production. This integrated approach reinforces the factory’s position as a cornerstone of excellence in the regional feed industry.

To maintain its market-leading position, the facility integrates a state-of-the-art laboratory with Near-Infrared (NIR) technology for advanced analysis of raw materials and finished products. This supports robust Quality Control and Quality Assurance systems, ensuring compliance with strict international safety and nutritional standards. The operations are also ISO 9001 & ISO 22000 certified, reinforcing strong quality and food safety management. Through this combination of scale and precision, the Sadat Feed Mill remains a cornerstone of excellence in the regional feed industry.

Animal Feed & Health

As part of our commitment to delivering end-to-end value, we provide a highly differentiated technical farm support service at no cost to our partners. Backed by a dedicated team of over 50 experienced veterinary consultants and field technicians, we deliver continuous, on-site guidance to optimize flock health, welfare, and overall farm performance.

Our support includes regular farm visits, feed conversion ratio (FCR) optimization, tailored vaccination program design, and comprehensive growth performance analysis supported by benchmarking against industry standards. We also provide biosecurity guidance and best-practice recommendations to enhance operational efficiency. In addition, our team ensures rapid emergency response to safeguard operations and minimize risks, enabling farmers to achieve higher productivity, improved cost efficiency, and sustainable, long-term results.

Consumer Food & Retail

Premium, market-ready products delivered through a fully integrated value chain — combining advanced processing with trusted consumer brands for local and global markets.

Dakahlia Slaughterhouse

A state-of-the-art facility at the Altal El Kabeer Processing Plant — fully automated with manual halal slaughtering, advanced air-chilling that preserves taste and ensures accurate weight, and EU-standard systems backed by a fully controlled cold chain.
